## CH 43 Assessment of Renal & Urinary Tract Function

1.	_____ aldosterone	a. painful or difficult urination
2.	_____ antidiuretic hormone	b. tuft of capillaries forming part of the nephron through which filtration occurs
3.	_____ anuria	c. increased formation and secretion of urine
4.	_____ bacteriuria	d. urination or voiding
5.	_____ creatinine	e. bacteria in the urine, bacterial count higher than 100,000 colonies/mL
6.	_____ diuresis	f. red blood cells in the urine
7.	_____ dysuria	g. plasma filtered at the glomerulus into the kidney tubules
8.	_____ frequency	h. hormone secreted by the posterior pituitary gland; causes the kidneys to reabsorb more water; also called vasopressin
9.	_____ glomerular filtration	i. total urine output of less than 50 mL in 24 hours
10.	_____ glomerulus	j. voiding more frequently than every 3 hours
11.	_____ hematuria	k. hormone synthesized and released by the adrenal cortex; causes the kidney to reabsorb sodium
12.	_____ micturition	l. structural and functional unit of the kidney responsible for urine formation
13.	_____ nephron	m. endogenous waste product of muscle energy metabolism

## KEY: CH 43 Assessment of Renal & Urinary Tract Function

1.	<u>k</u>	aldosterone	a. painful or difficult urination
2.	<u>h</u>	antidiuretic hormone	b. tuft of capillaries forming part of the nephron through which filtration occurs
3.	<u>i</u>	anuria	c. increased formation and secretion of urine
4.	<u>e</u>	bacteriuria	d. urination or voiding
5.	<u>m</u>	creatinine	e. bacteria in the urine, bacterial count higher than 100,000 colonies/mL
6.	<u>c</u>	diuresis	f. red blood cells in the urine
7.	<u>a</u>	dysuria	g. plasma filtered at the glomerulus into the kidney tubules
8.	<u>j</u>	frequency	h. hormone secreted by the posterior pituitary gland; causes the kidneys to reabsorb more water; also called vasopressin
9.	<u>g</u>	glomerular filtration	i. total urine output of less than 50 mL in 24 hours
10.	<u>b</u>	glomerulus	j. voiding more frequently than every 3 hours
11.	<u>f</u>	hematuria	k. hormone synthesized and released by the adrenal cortex; causes the kidney to reabsorb sodium
12.	<u>d</u>	micturition	l. structural and functional unit of the kidney responsible for urine formation
13.	<u>l</u>	nephron	m. endogenous waste product of muscle energy metabolism
